Shots and Wormer Schedule

AGE	WORMERS	VACCINES
2 weeks	Fenbendazole (1)	
4 weeks	Fenbendazole	
5 weeks	Fenbendazole	
6 weeks	Fenbendazole	4-in-1 (2)
8 weeks	Wormer of choice	4-in-1 (3)
10 weeks	Wormer of choice	6-in-1 (4)
16 weeks	Rabies	

- (1) Fenbendazole is a vet-recommended puppy wormer that is easy for puppies to digest. You may switch to the type of puppy wormer recommended by your vet.
- (2) The 4-in-1 Fenbendazole vaccine helps build immunity towards the following diseases: Distemper, Adenovirus Type 2, Parainfluenza and Parvovirus.
- (3) The 4-in-1 Wormer of choice
- (4) The 6-in-1 Wormer of choice

It is strongly recommended to check this shot/wormer schedule with your vet, who may wish to set up another specific schedule for your puppy. As your puppy has only had the first of the required series of shots, it is strongly recommended to keep to the above vaccine schedule, and get your puppy immunity-boosted on the week specified above.
